

Lessons from faculty who teach and research AI

From classroom to campus service

Rick Anderson · Director of Emerging Technology, Rutgers UOES

The fly on the wall

Working next to faculty

Teaching the tech

Jim Samuel and Carmela Scala

Research

Sonia Yaco

Research → teaching

OSCE: Siobhan Corbett and Rey Riordan

Student and dept. use

LLEXIS: Rahul Mittal and Jey Labadorf

University services

VHS: Rebecca Brody, via Scott Parrot

Securing research

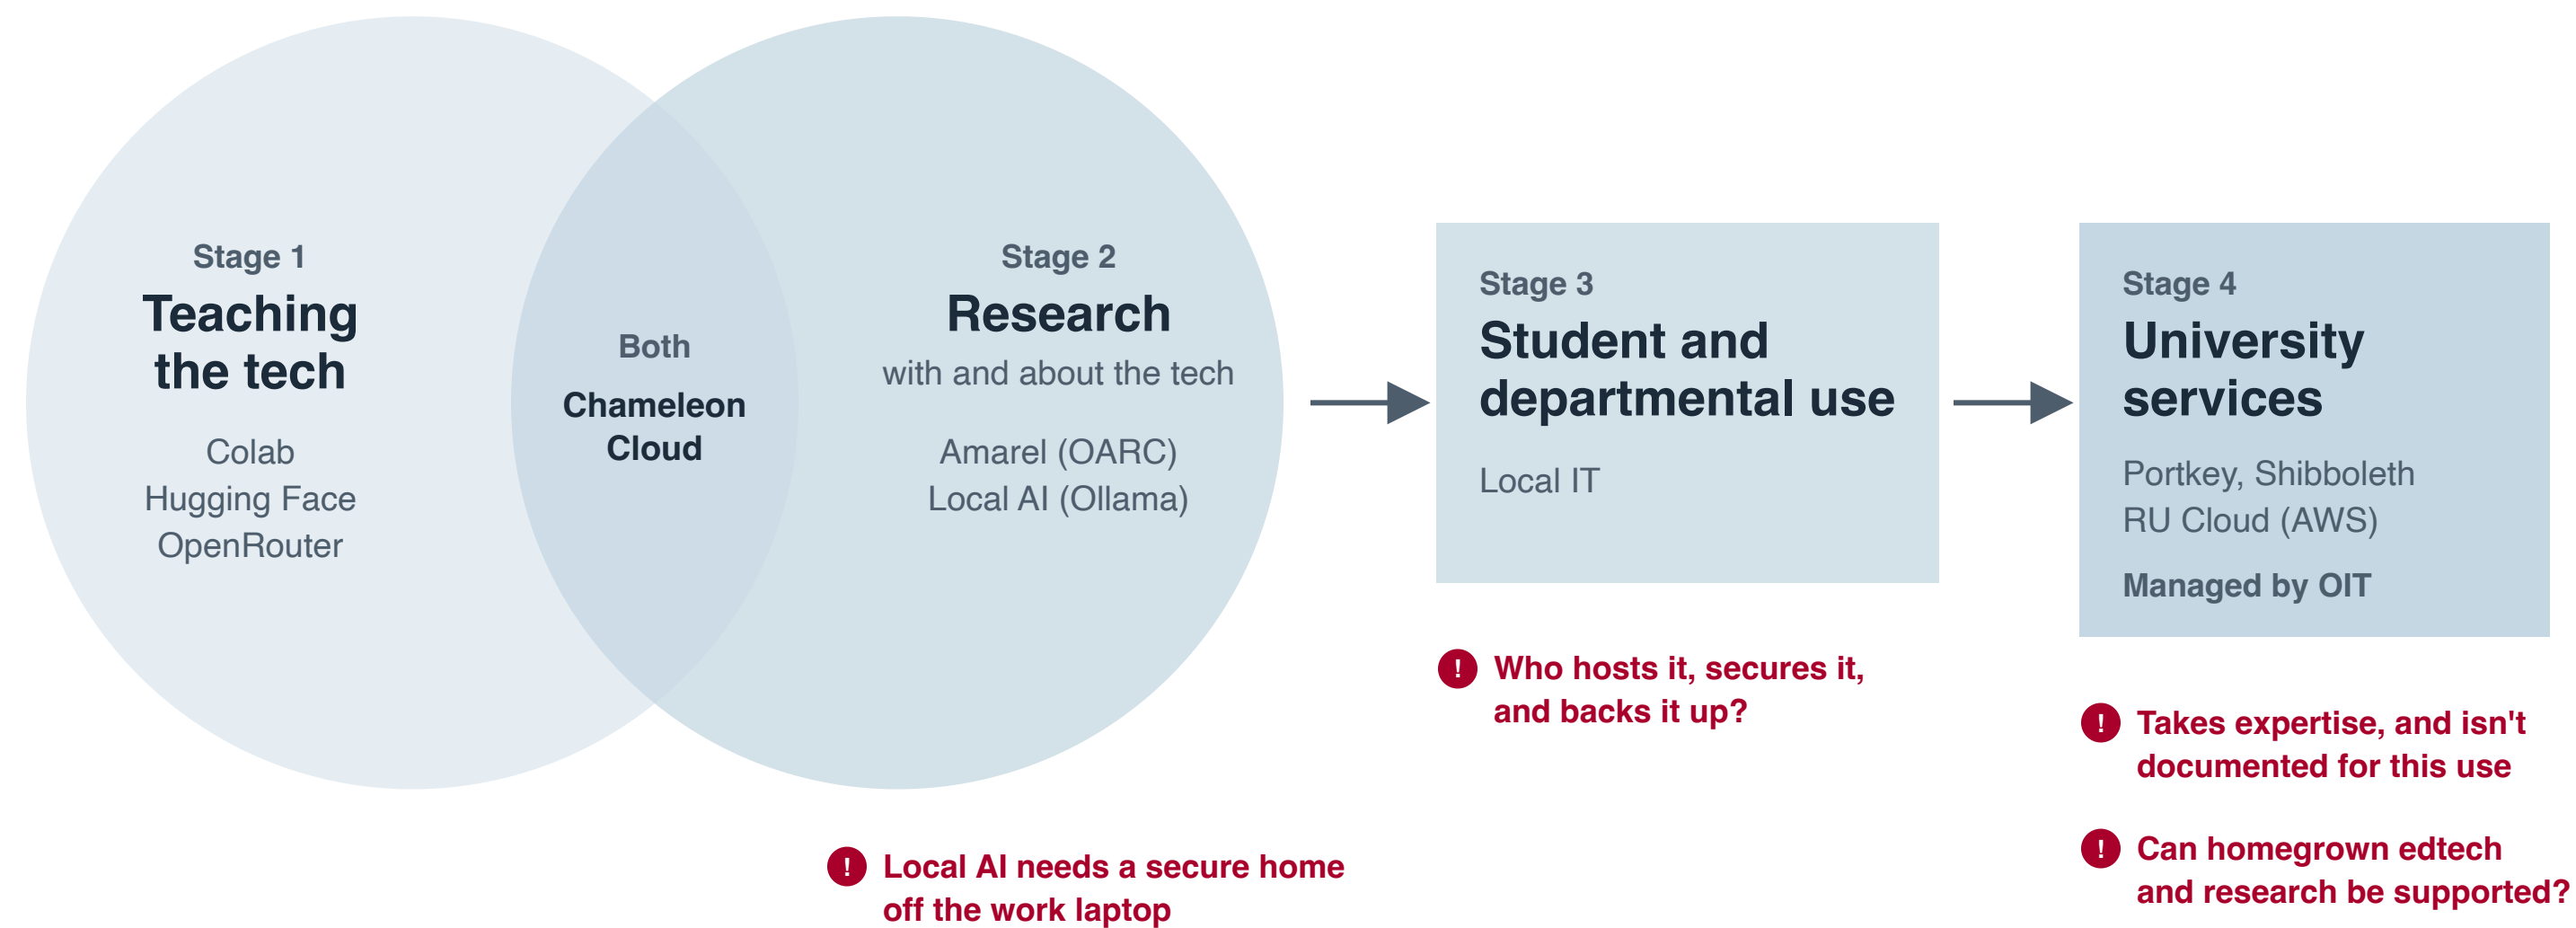

Laura Ramírez

The pain point

**Faculty don't have
AI-familiar support**

The pathway

Where does a faculty AI project go as it scales?

The projects do what's necessary. Integrating with central services is the hard part.

Stage 1

Teaching the tech

Stage 2

Research with and about the tech

Stage 3

Student and departmental use

Who hosts it, secures it, and backs it up?

Stage 4

University services

Can homegrown edtech and research be supported?

The questions for Rutgers

- 1 Can we identify these projects early?
- 2 Can we carry them from research to hosting with students?
- 3 Can central services be documented for this kind of use?

Closing thoughts

Students are building this

The student perspective: Rey and Jey, on a panel later today
